Acid Stain

Create amazing rich finishes with Westcoat Acid Stain. Made from an acid solution, wetting agents, and metallic ions, Acid Stain penetrates and reacts with concrete and Westcoat's cement to produce interesting, mottled colors that stand the test of time. Ideal for both interior and exterior projects, Acid Stain is the most dynamic, durable and UV resistant of the concrete stain systems.

Grind & Seal

The Acid Stain Grind & Seal System is a process of grinding the concrete, applying Westcoat's acid based stain and sealer. The Acid Stain Grind & Seal System is designed to create a mottled effect on existing concrete floors with high to low gloss sealer options. This system is used primarily on interior projects including showrooms, restaurants, cafes, breweries, wineries, offices, and hotels. Recommended for use on interior floors where maximum durability is necessary.

Prep & Seal

The Acid Stain Prep & Seal System is a process of preparing and applying Westcoat's acid based stain and sealer. The Acid Stain is made from an acid solution, wetting agents and metallic ions, when it is placed on concrete, it chemically combines the metallic ions with particles in the concrete to form oxides. The stain is then sealed for protection. This system can be used on exterior projects including restaurants, cafes, hotels, pool decks, patios and driveways. Recommended for use on exterior floors where good durability and solid UV resistance is desired.

Advantages

- Durable
- Mottled Finish
- Unique Colors
- Penetrating
- Long Lasting
- Chemical Resistant
- UV Resistant
